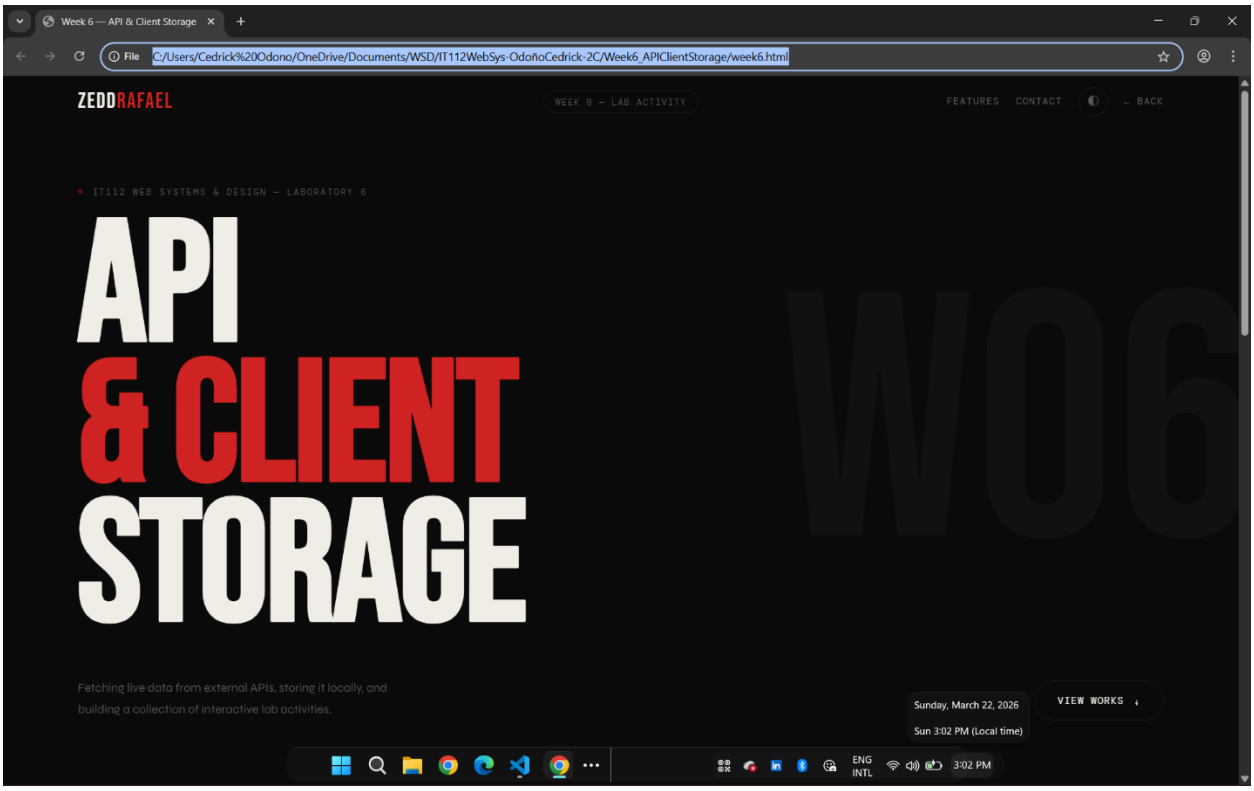
IT 112: Web Systems and Technologies
Laboratory Reflection – Week6_APIClientStorage

Name: Odoño, Cedrick R.. **Course/Year:** BSIT-2C
Instructor: Guillermo V. Red, Jr. **Date:** 03-22-26



During this week, I focused on how APIs and client storage can enhance the capabilities of a webpage. I experimented with the GitHub API to retrieve user data and practiced storing information locally, which helped me understand how web applications can interact with external services while maintaining user preferences on the client side. I also worked with the OpenWeather API to present real-time weather details; such as temperature, humidity, and conditions with a clean, styled interface.

My main project was an upgraded version of my Week 6 laboratory. I created a central webpage that included all the APIs in one place, making the site more organized and visually appealing. On this main page, I combined all the required features while keeping the navigation, header, and footer consistent across the design.
