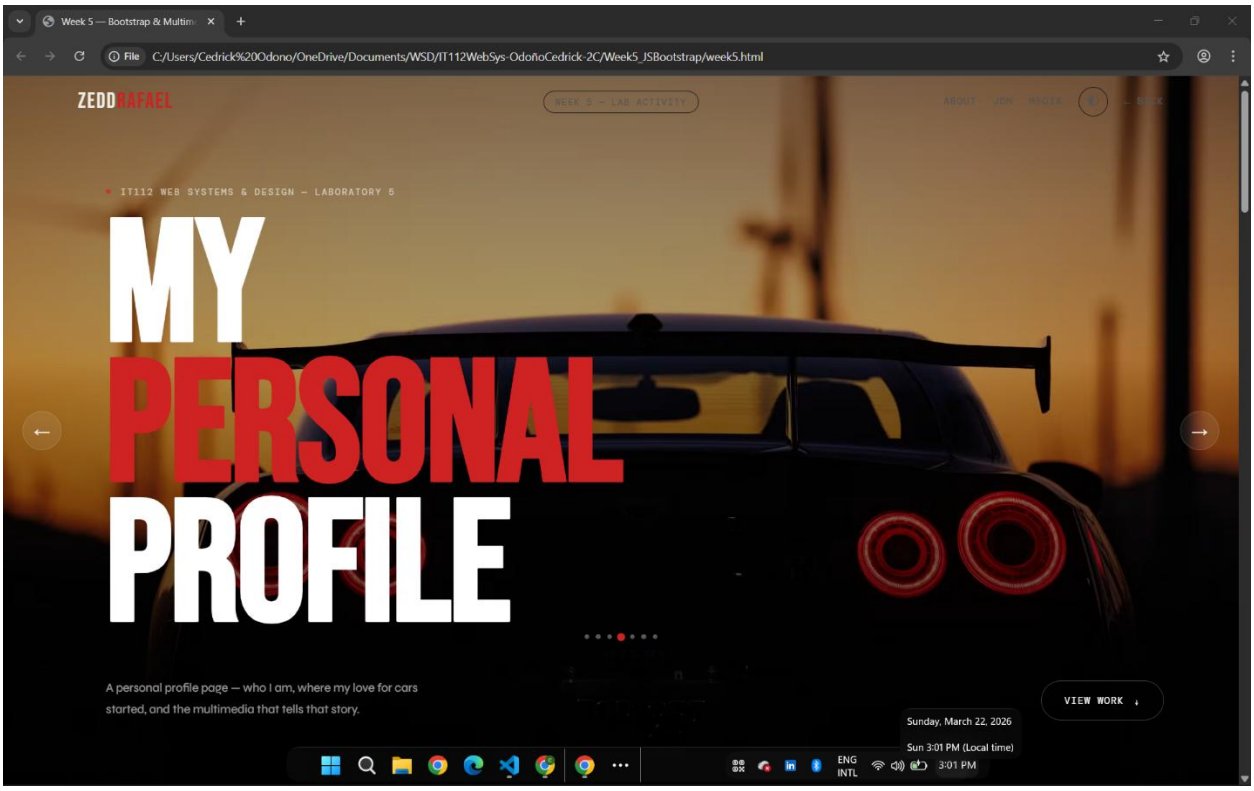
IT 112: Web Systems and Technologies
Laboratory Reflection – Week5_JSBootstrap

Name: Odoño, Cedrick R.. **Course/Year:** BSIT-2C
Instructor: Guillermo V. Red, Jr. **Date:** 03-22-26



This week, I integrated JavaScript with Bootstrap to create more interactive and dynamic web pages. I learned how to use Bootstrap's components together with JavaScript to enhance the user experience. Bootstrap simplified the layout while JavaScript handled the logic and data, and applying both allowed me to upgrade my earlier work into something more professional-looking and practical. This activity showed how my skills from previous weeks could be combined to build a completer and more engaging webpage.

My main project was an upgraded version of Week 2, since that was the instruction for the Week 5 laboratory. Although we don't have a lab bin, my original Week 5 file was a simpler version that included a carousel in the navigation. For this improved version, I added personal touches such as including a childhood photo, which I connected to the theme from Week 2 about cars and JDM culture.
